

Figure 6.

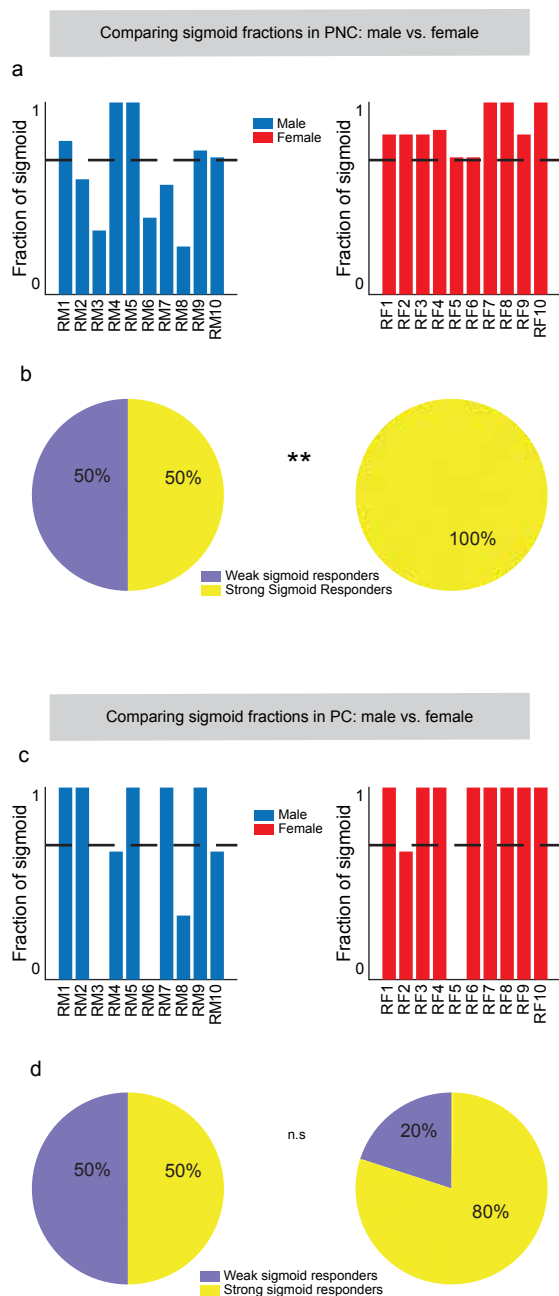

Figure 6. Identification of vulnerability in proximal tasks.

(a) Plots showing the fraction of a sigmoid across all sessions from PNC task sessions for individual males ($n = 10$) and females ($n = 10$), where the dashed line at $y=0.7$ represents the threshold for fitting sigmoidal psychometric functions.

(b) Pie charts showing that there are significantly more susceptible male subjects than females (chi-square test, $p = 0.0098$) in PNC.

(c) Plots showing the fraction of sigmoid across all sessions in PC task for individual males ($n = 10$) and females ($n = 10$).

(d) There is no significant difference in the number of susceptible individuals across sex (chi-square test, $p = 0.16$).
