

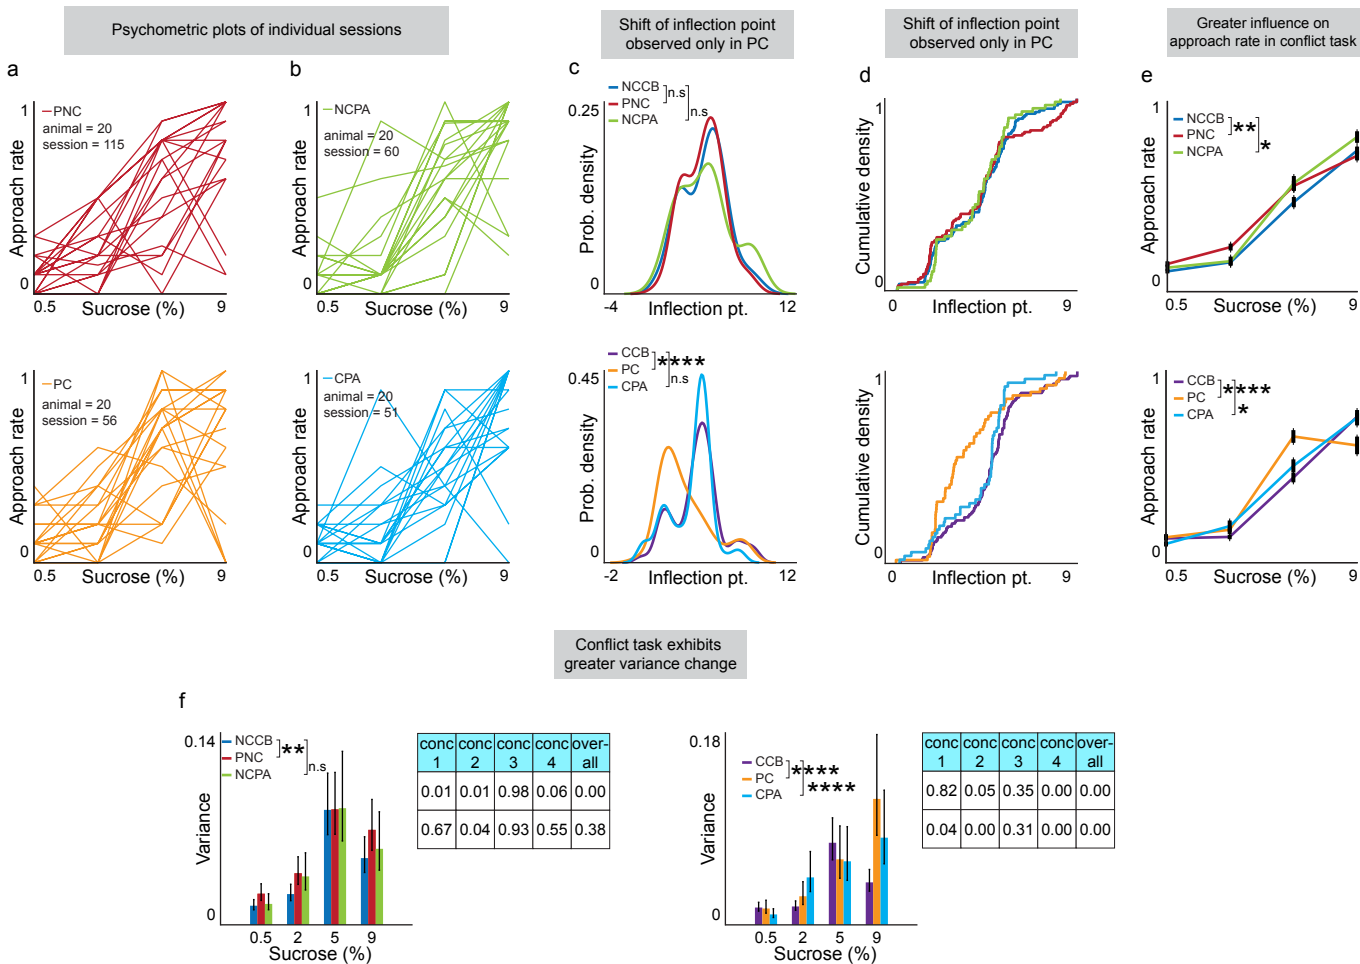

**Figure 4.**

**Figure 4. Alcohol effects proximal cost benefit tasks.**

(a) Psychometric plots of approach rates for individual sessions of rats (n=20) in proximal non-conflict (PNC) and proximal conflict (PC) tasks.

(b) Psychometric plots for individual sessions of all rats (n=20) in non-conflict post-alcohol (NCPA) and conflict post-alcohol (CPA) tasks.

(c) A significant shift of inflection points in PC compared to CCB (KS test, p=0.0000).

(d) Inflection point distribution represented as a cumulative density function.
